

Acknowledgments

This thesis is a constant effort to learn new things, and most importantly to excel at what I know. Throughout two years, this work was never to see the light without a great help from peoples around me, and peoples in my mind. I would like to thank Dr. John Farris for his great effort and help, also, I would like to thank Dr. Hugh Jack for his great tips almost every day, and his patience. Not to forget the many thanks to Bob Bero. I would like to thank Mr. Clive Warren, Mr. Ian Hutchinson, and Mr. Michael Wilm from Renishaw PLC, in Chicago, IL they made a great help to my project.
